1.Applicant's election with traverse of Group I, claims 1-15 in the reply filed on December 14, 2006 is acknowledged. The traversal is on the ground(s) that (1) because of the dependency of claims 16-20, they would necessarily include any and all special technical features of claim 1, and (2) a search of all claims would not impose an undue burden on the examiner. This is not found persuasive because claims 1-15 require a search for manipulative steps while claims 16-20 require a search for article structure, such that an undue burden would be imposed on the examiner.

The requirement is still deemed proper and is therefore made FINAL.

2.Claims 16-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on December 14, 2006.

3.Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for embodiments disclosed in the examples, does not reasonably provide enablement for the full scope of what is now claimed. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. The final clause of claim 1 sets forth a required difference between a phase separation or demixing temperature and a solidification temperature. Since this criterion must be met for any polyolefin selected, based on the full scope of what is now claimed, undue experimentation would be required of one of ordinary skill in the art since that one of ordinary skill in the art would be faced with conducting the test set forth

Art Unit: 1732

in the instant specification at page 10, lines 1-12 for most polyolefin-solvent combinations selected in order to determine whether a particular polyolefin-solvent combination met the criterion set forth in the final clause of claim 1.
